ABOUT ERCON DOOR

Beautiful doors are the focal point of any home. A door with the desired aesthetic looks which also gives superior weatherability and performance makes all the difference. ERCON FRP Doors are Engineered and Manufactured in a quality controlled environment to delight the customers by its aesthetic looks and performance. Our FRP Doors are preferred over other material doors where the doors are exposed to environment. At the same time these doors are also preferred for bathroom and other internal doors of the homes.

When performance is the criteria for selection of doors, nothing can beat fibre glass as it does not crack, rot, warp, split or splinter like wooden doors. Fibre glass doors are also water and termite resistant like plastic doors and at the same time are much stronger than the plastic doors.

The first step towards manufacturing of ERCON Doors is to apply self pigmented Gel-Coat which gives the laminates of the doors an extra protective layer and longer life. The Gel-Coat results in giving the door a very good and attractive finish.
